

Reference No. 6.12

EMPLOYED WAGE AND SALARY EARNERS : AUSTRALIA, APRIL 1975
PRELIMINARY

MAIN FEATURES

The following figures refer only to *civilian wage and salary earners excluding those in agriculture and private domestic service* :

- In April 1975 employment increased by 9,400 persons of whom 9,300 were females. In seasonally adjusted terms this was a rise of 15,600.
- Private employment increased by 6,500. Government employment increased by 2,900 but this figure was affected by a dispute involving Metropolitan Water Sewerage and Drainage Board employees in New South Wales.
- Employment increased in retail trade (5,600), health, hospitals, etc. (3,200) and amusement, hotels, etc. (3,100). Employment in manufacturing fell by 4,300 due largely to a decrease of 3,400 in food, drink and tobacco. However in seasonally adjusted terms, employment in manufacturing rose slightly.
- An increase in employment was recorded in all States other than New South Wales which was affected by an industrial dispute. The largest increase occurred in Queensland (5,900 persons).

EXPLANATORY NOTES

Introduction

This preliminary statement will be followed in due course by the monthly bulletin *Employment and Unemployment* (Reference No. 6.4) which gives information in greater detail.

Reference period

2. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month.

Scope of Estimates

3. The series in this statement relate only to *wage and salary earners* not the total labour force. The

statistics therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are employees in agriculture and private domestic service, and some part-time employees. For the sake of brevity, wage and salary earners are referred to in the tables as 'employees'.

4. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Method of estimation

5. The estimates are based on benchmarks derived from the results of the 1966 population census. Month-to-month changes shown by current returns are linked to the benchmark data to derive the monthly estimates. Current returns are of three main types :

- . payroll tax returns
- . returns from government bodies
- . other current employment returns (e.g. for hospitals).

6. Recorded employment obtained from these sources is estimated to account for about 90 per cent of the total number of employees in the industries covered. The balance (that is, unrecorded private employment) is estimated.

Government employment

7. Government employees comprise not only administrative employees but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, post office, air transport, education (including universities), radio, television, police, public works, factories and departmental hospitals and institutions.

NOTE. Any discrepancies between totals and sums of components in tables are due to rounding. The figures shown are subject to revision.
